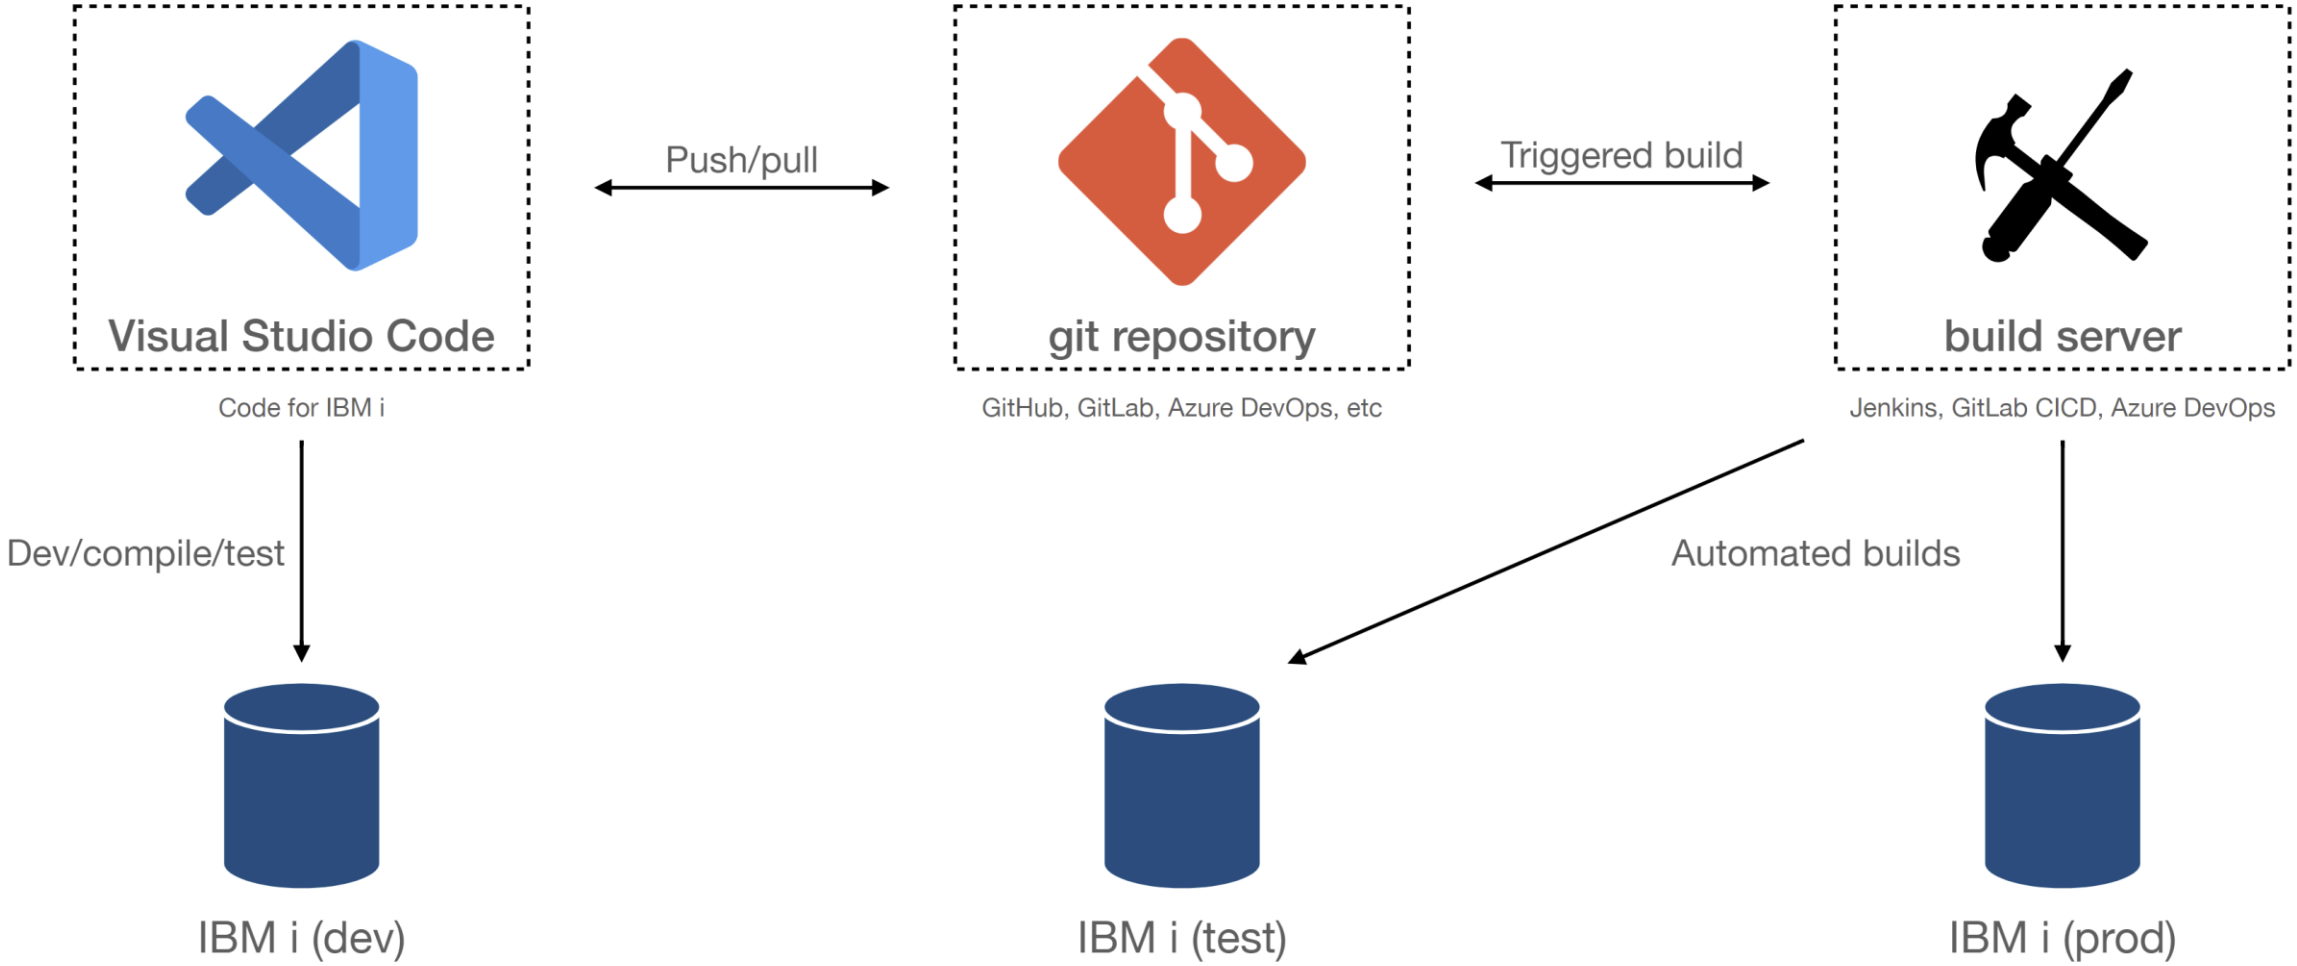
The Modern Development Lifecycle with Git

© Copyright IBM Corporation 2024

What Does Modern Development Look Like?

IBM i
continuous innovation
continuous integration



© Copyright IBM Corporation 2024

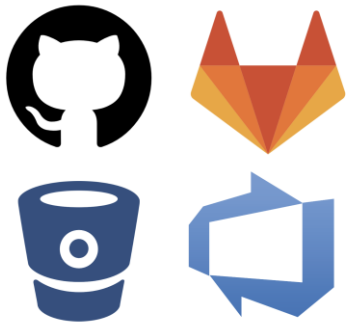
Development with Git

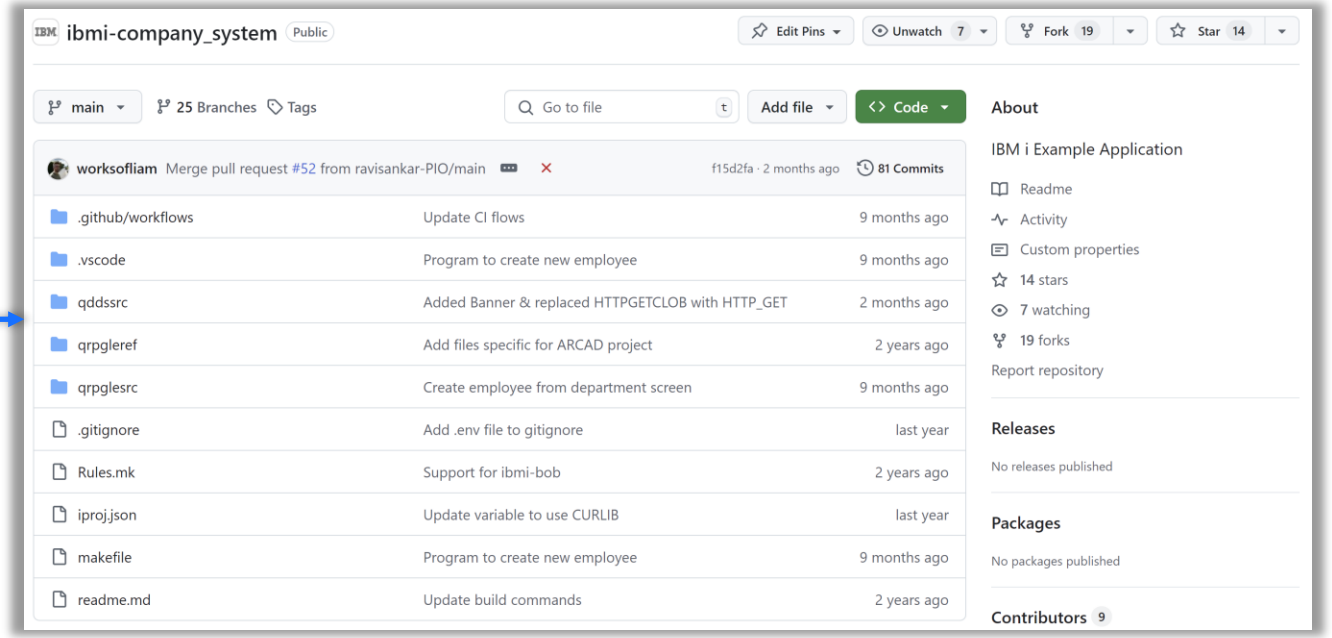
IBM i
continuous innovation

- Source is managed by Git
  - Complete change history
  - Branching and merging capabilities
  - Traceability

GitHub, GitLab, Azure DevOps, etc

- Variety of options for Git hosting services
  - GitHub, GitLab, Azure DevOps, etc



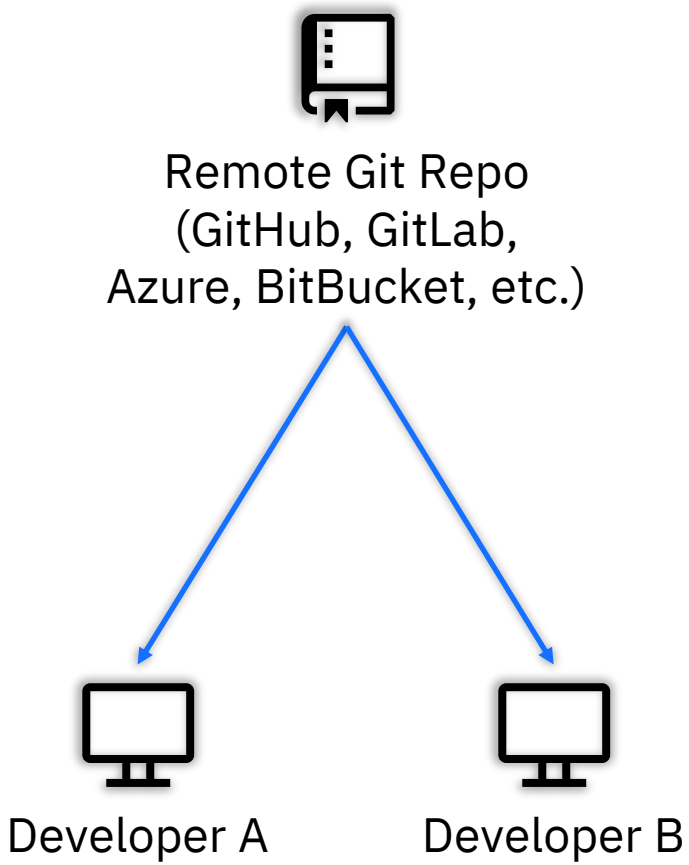


© Copyright IBM Corporation 2024

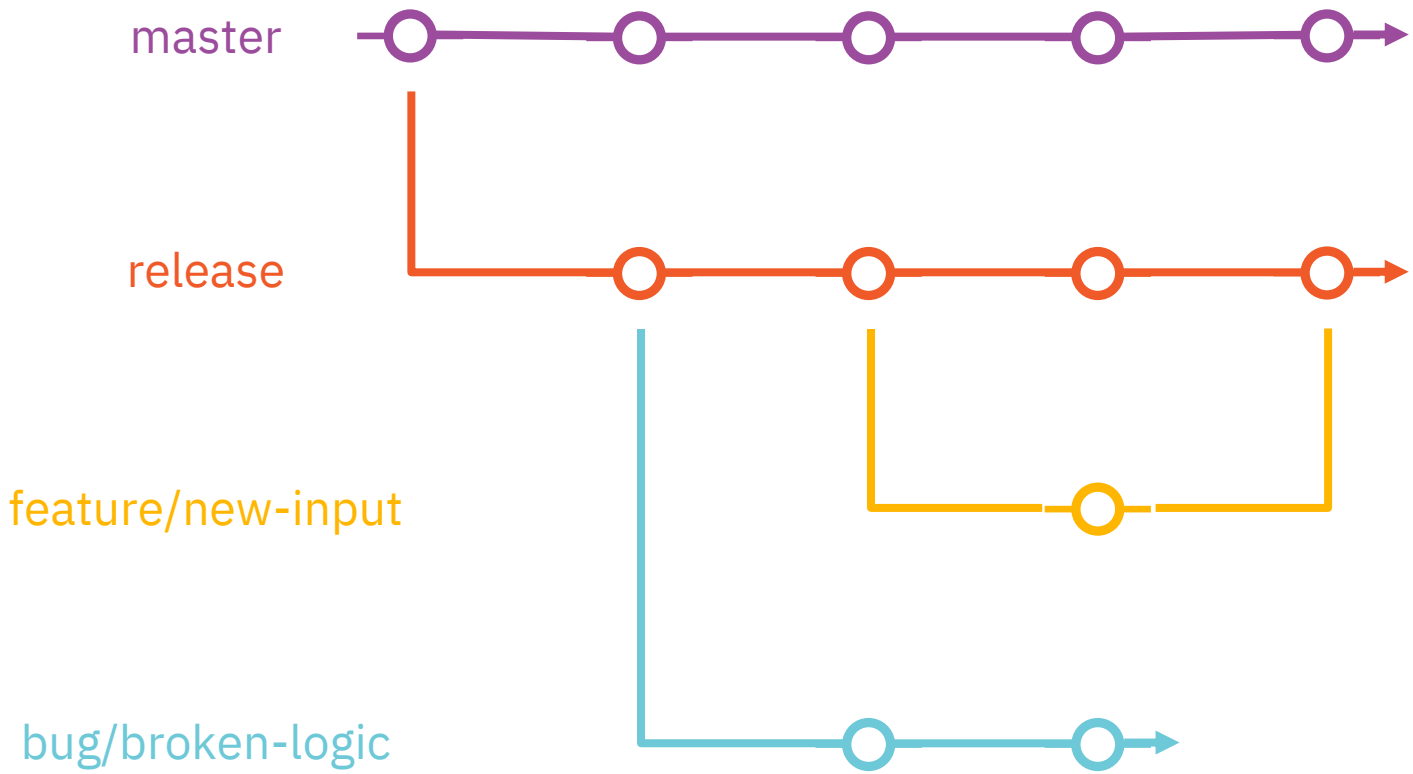
Why use Git?

IBM i
continuous innovation
continuous integration

Distributed Development



Version Control and Git Workflow



© Copyright IBM Corporation 2024

Local Development Experience

IBM i
continuous innovation
continuous integration

- IBM i
  - IBM i integration via open-source extensions
  - Support for RPGLE, COBOL, CL, SQL, and more!
- Git
  - First class Git support
  - Hundreds of Git tools

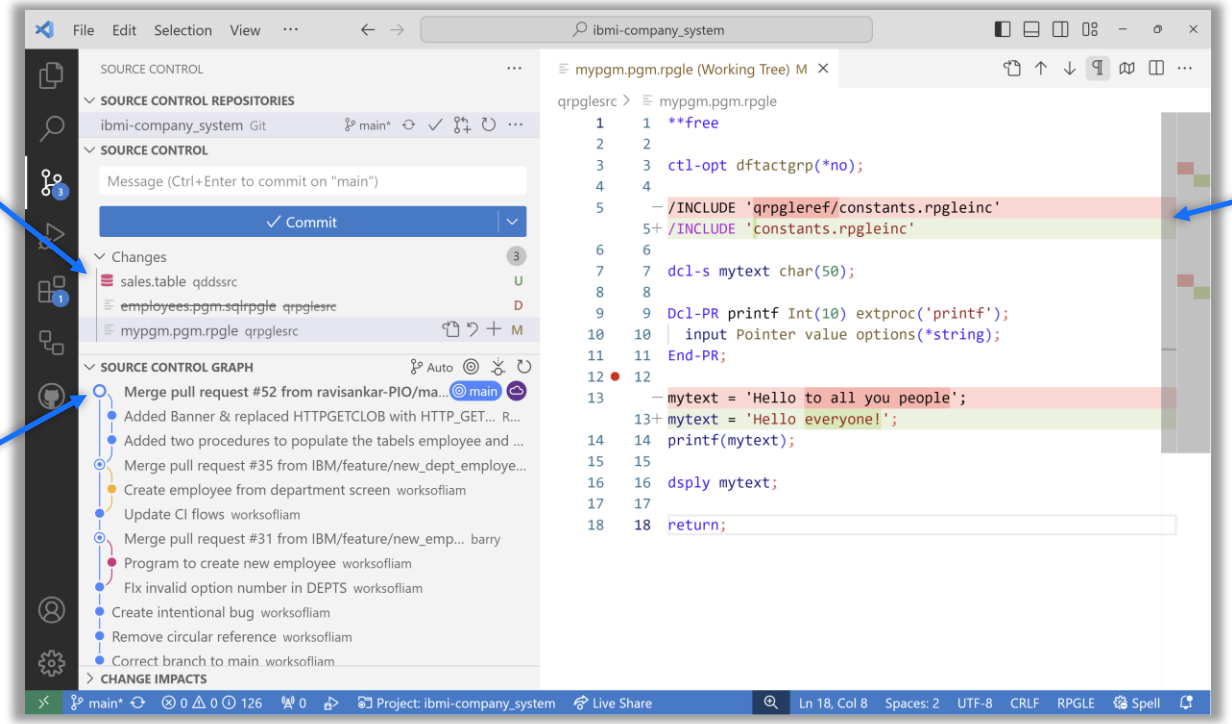
Visual Studio Code

Code for IBM i

View current repository changes

View a graphical representation of incoming and outgoing commits

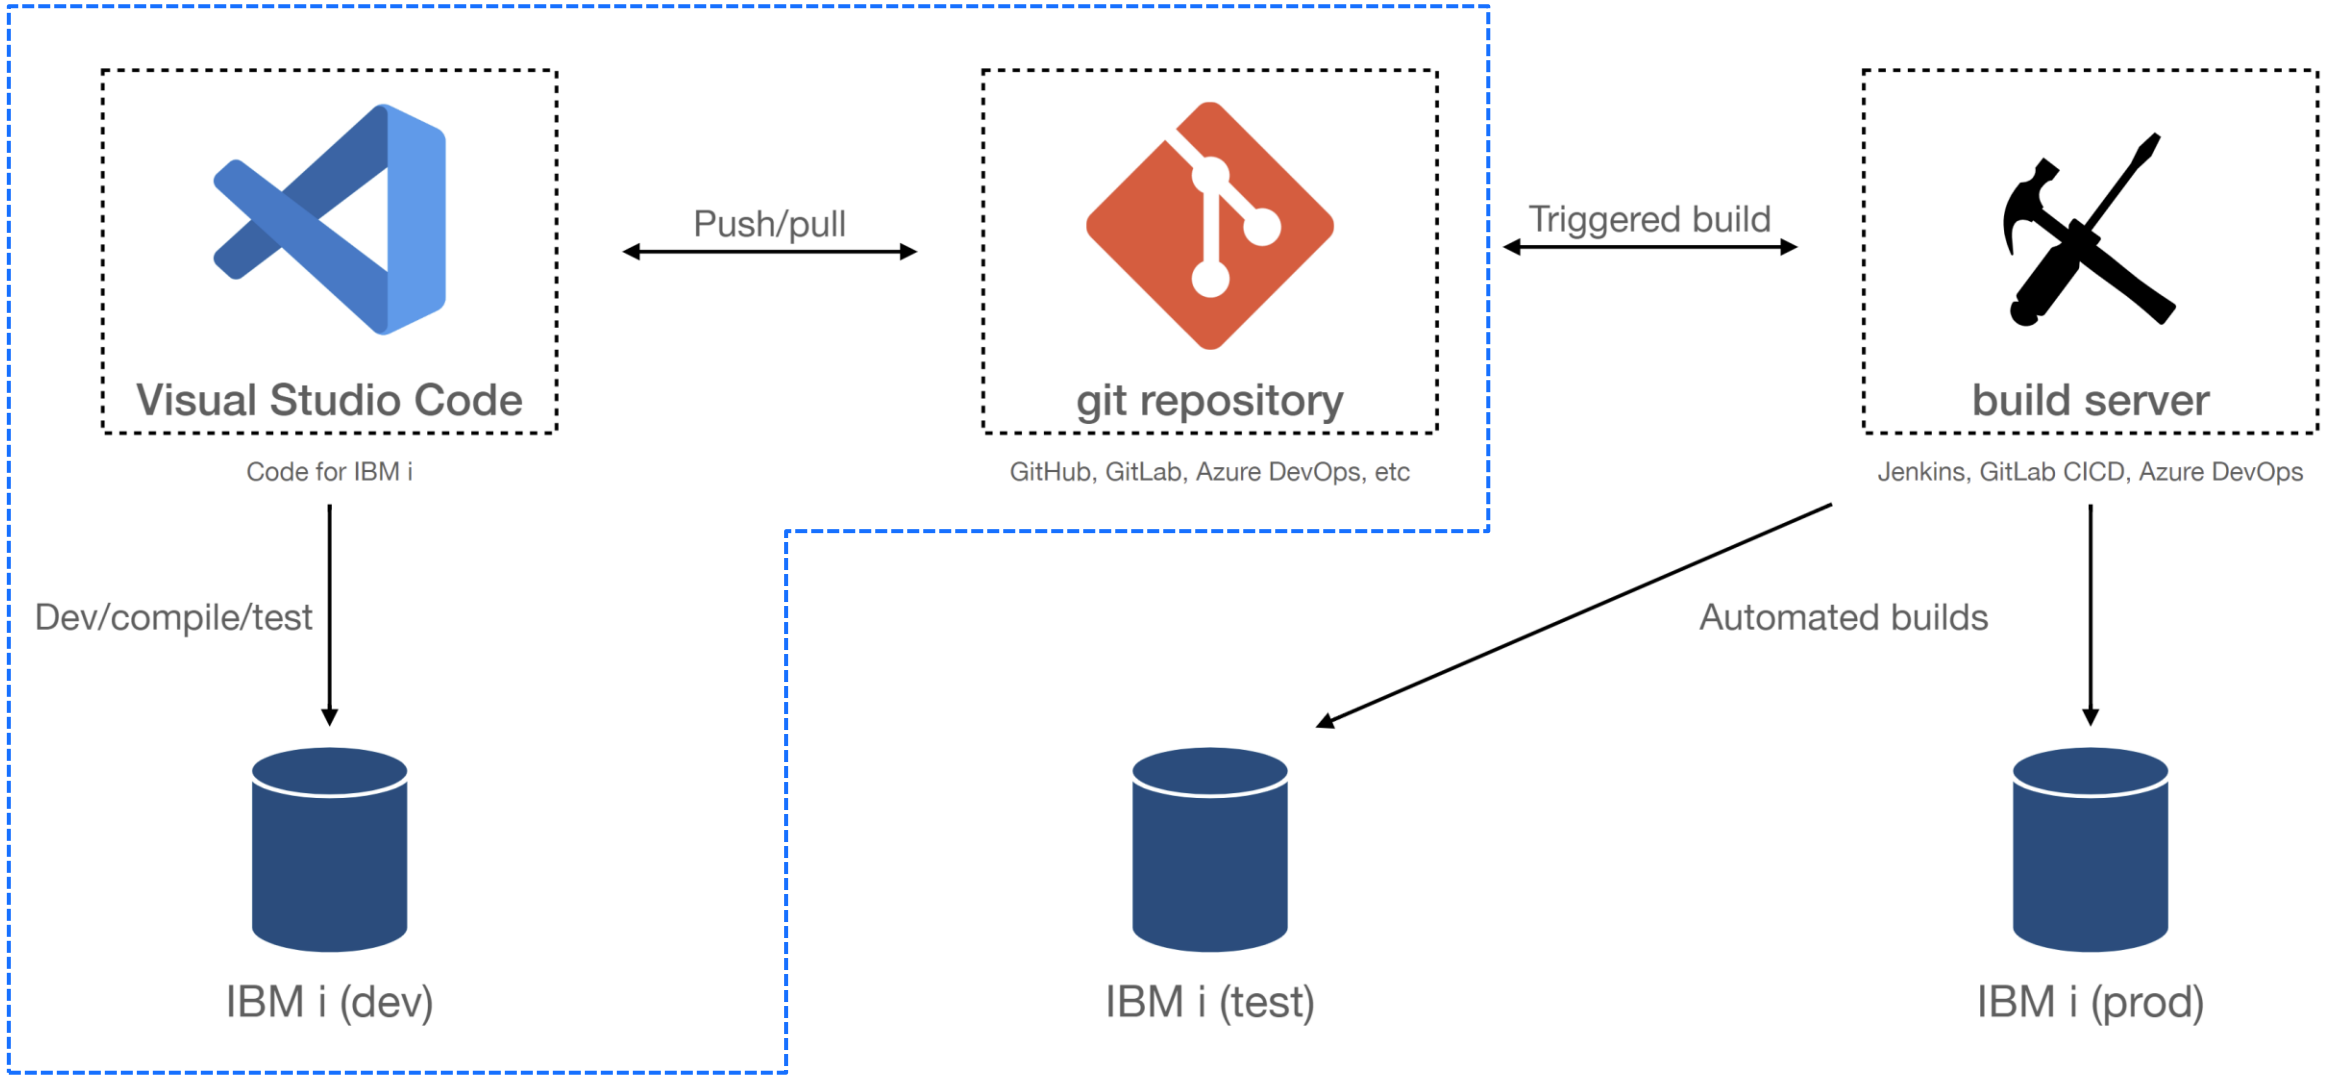
View changes line by line



© Copyright IBM Corporation 2024

How to work efficiently with these 3 components?

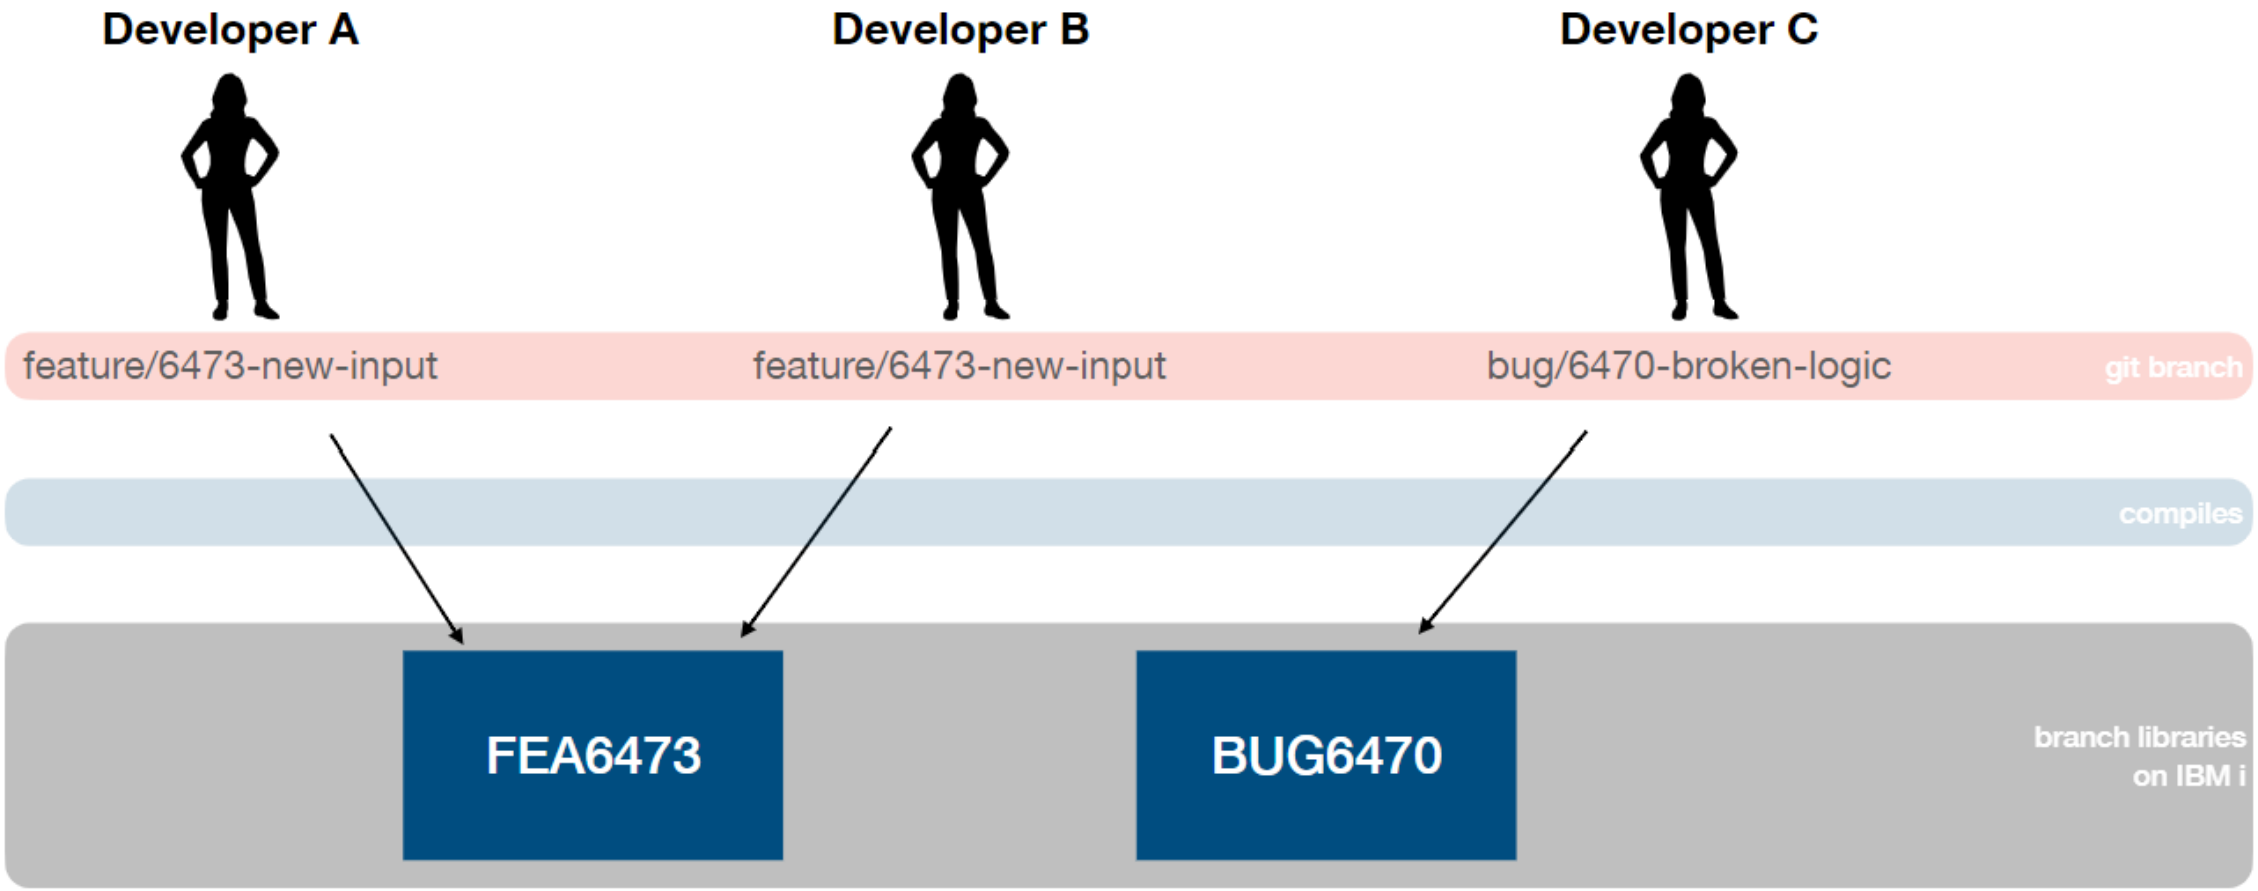
IBM i
continuous innovation
continuous integration



© Copyright IBM Corporation 2024

Map Git branches to libraries on IBM i

IBM i
continuous innovation
continuous integration

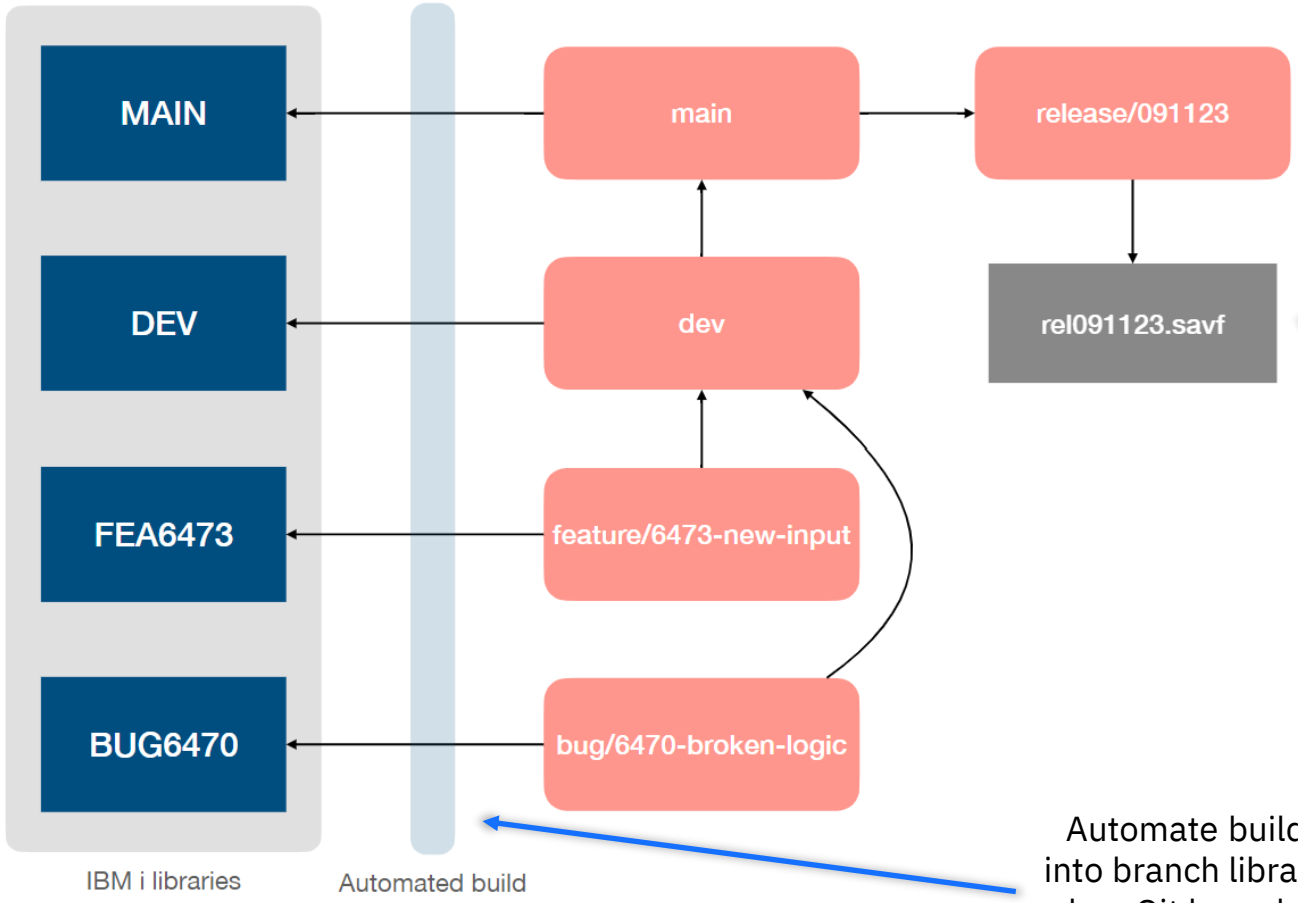


© Copyright IBM Corporation 2024

Build Server

IBM i
continuous innovation
continuous integration

Let's go one step further and automate this process



Jenkins, GitLab CICD, Azure DevOps

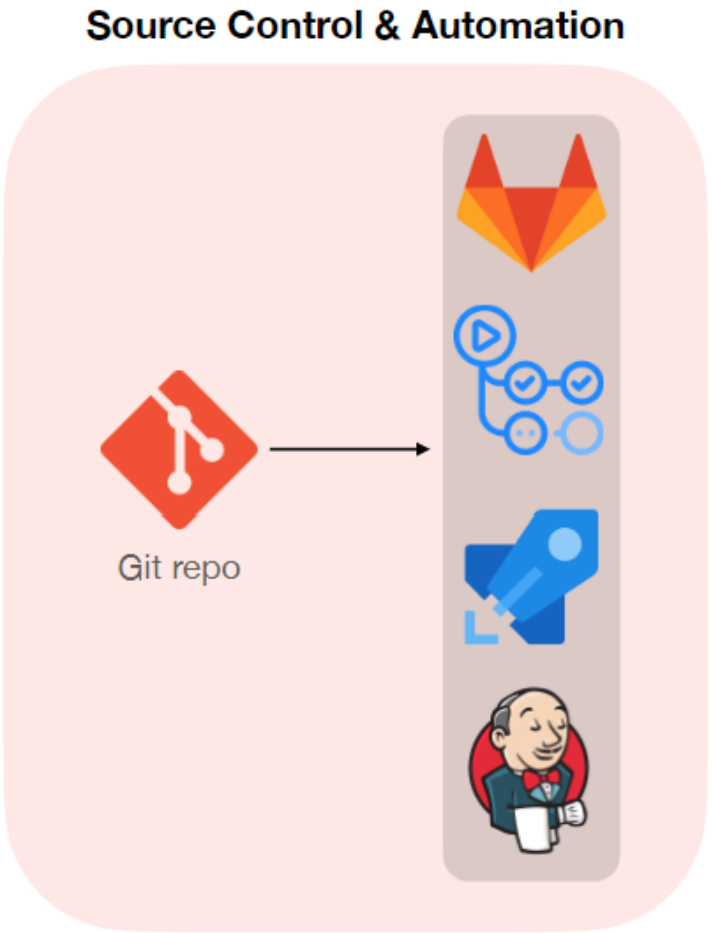
Generate save files when releases are created

Automate build into branch library when Git branch is updated

© Copyright IBM Corporation 2024

How to create workflows?

IBM i
continuous innovation
continuous integration



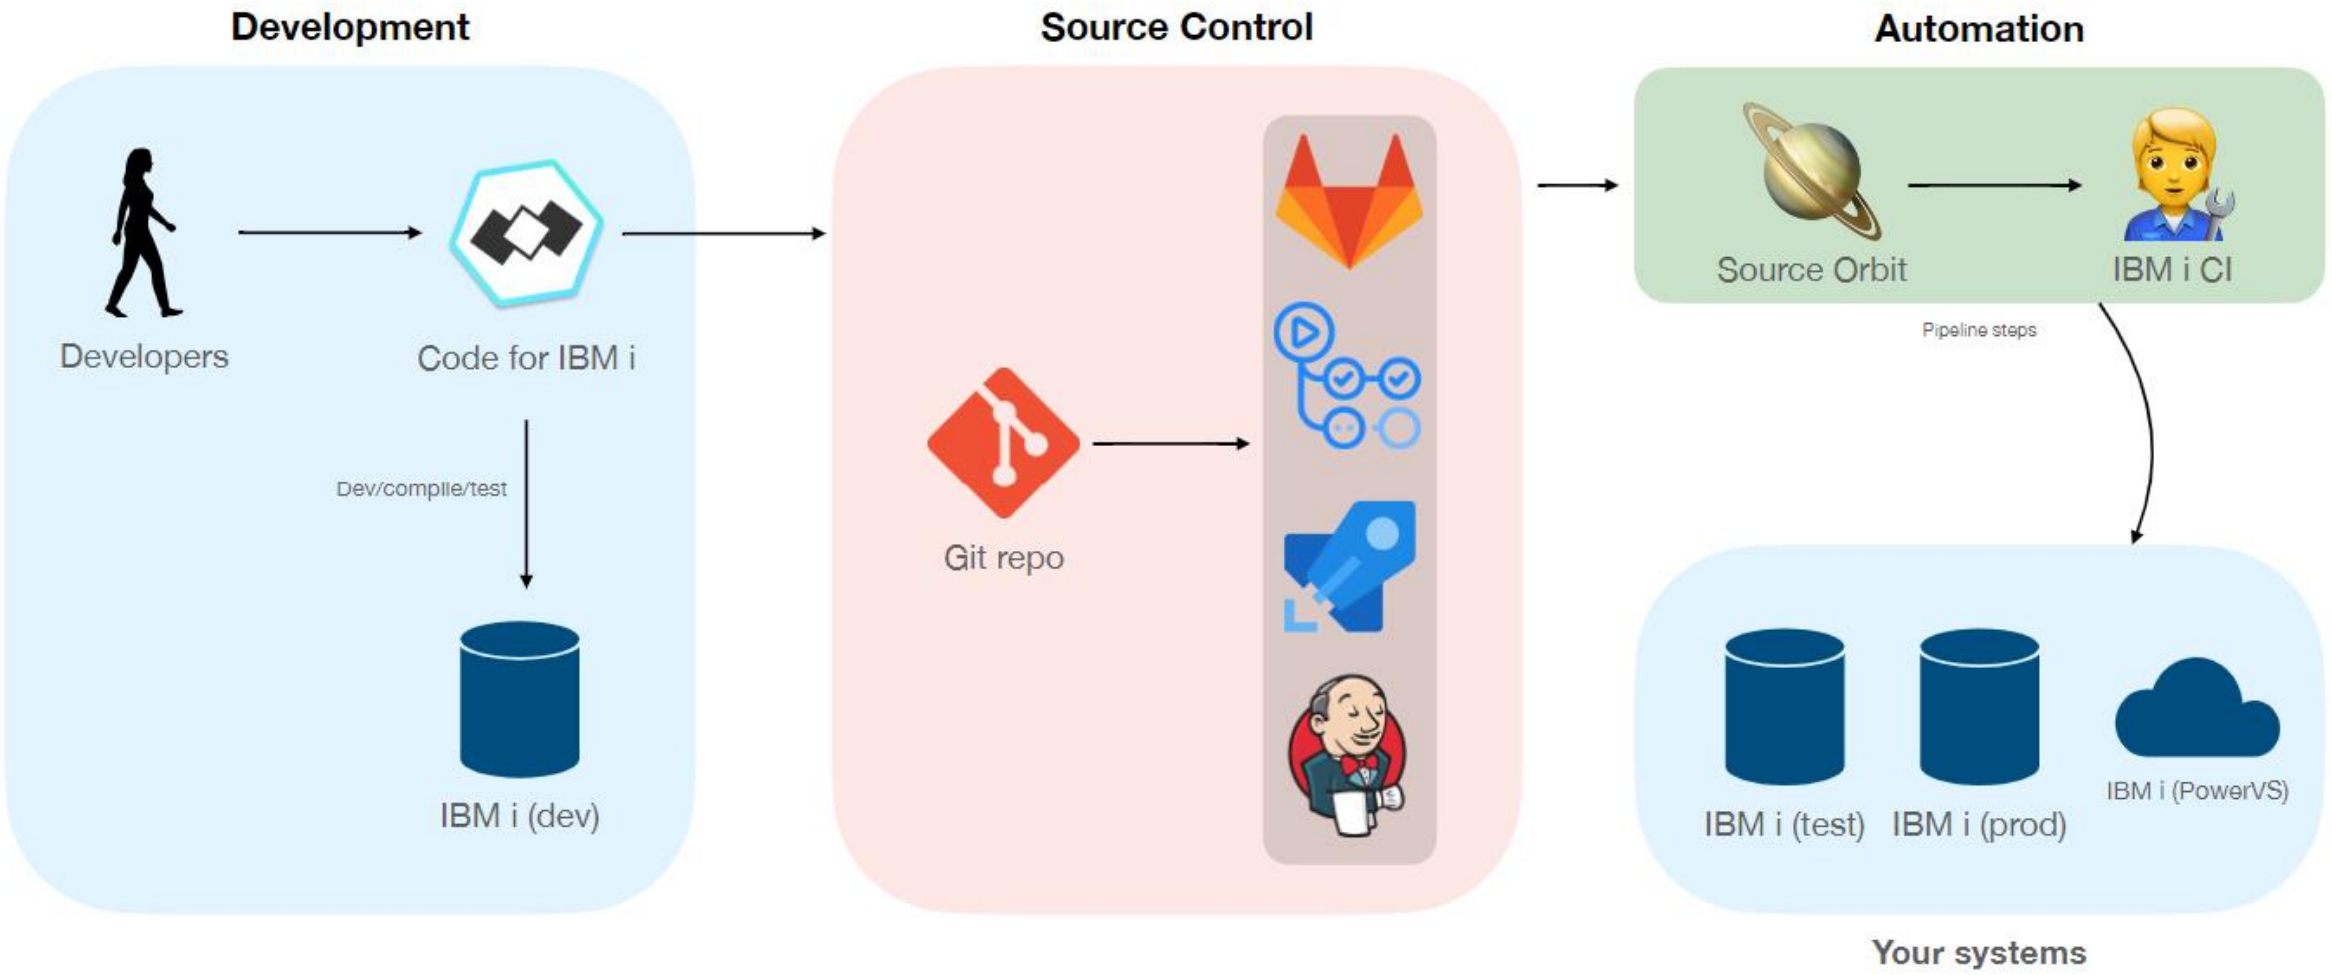
GitLab	`.gitlab-ci.yml`
Azure DevOps	`azure-pipeline.yml`
GitHub	`anything.yml`
Jenkins	`Jenkinsfile`

yml can also be yaml

© Copyright IBM Corporation 2024

How to achieve automation with IBM i?

IBM i
continuous innovation
continuous integration



© Copyright IBM Corporation 2024

IBM i
continuous innovation
continuous integration

Unlock Automated Builds with ibmi-ci

© Copyright IBM Corporation 2024

Overview

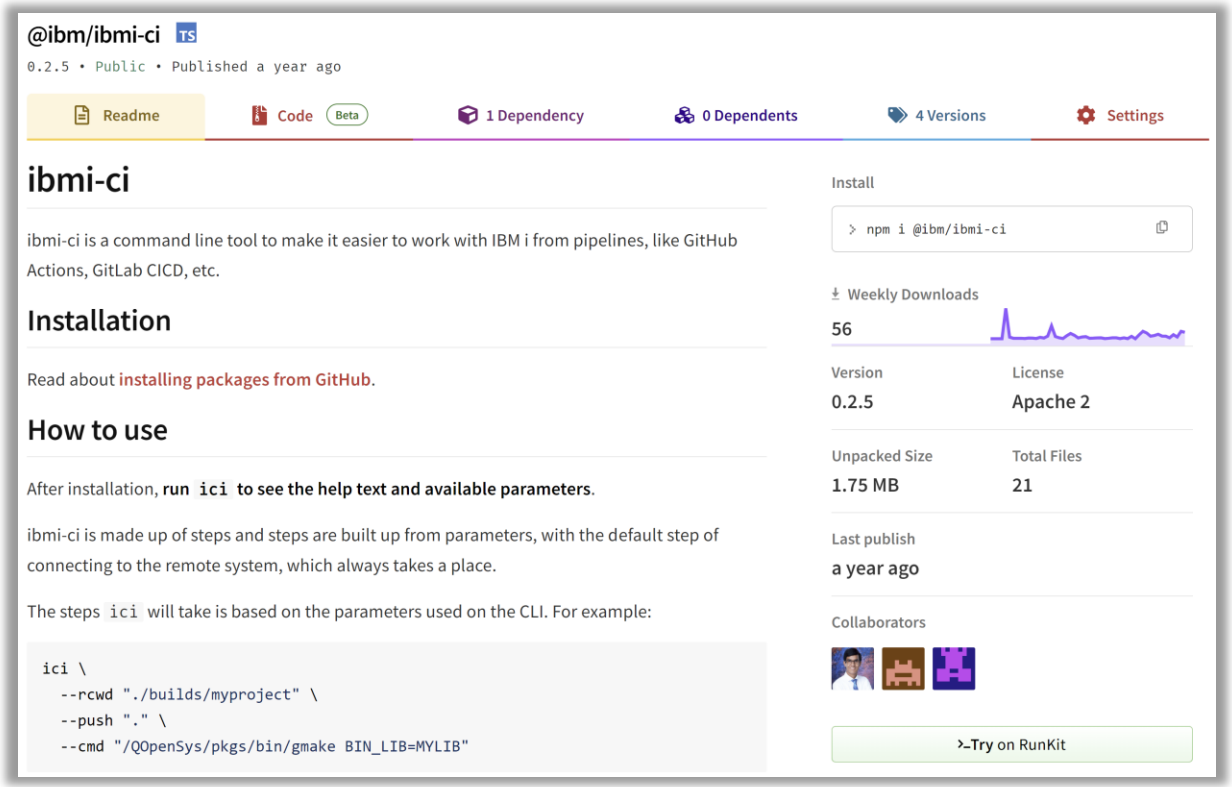
IBM i
continuous innovation
continuous integration

- A CLI tool to simplify working with IBM i from pipelines (ex. GitHub Actions, GitLab CICD, etc.)

- Outline a series of steps to perform with the first default step being to connect to an IBM i

- Installation: npm i @ibm/ibmi-ci

- Establishing IBM i connection
  - Required
    - IBMI_HOST
    - IBMI_SSH_POST
    - IBMI_USER
  - At least one required
    - IBMI_PASSWORD
    - IBMI_PRIVATE_KEY



© Copyright IBM Corporation 2024

CLI Usage

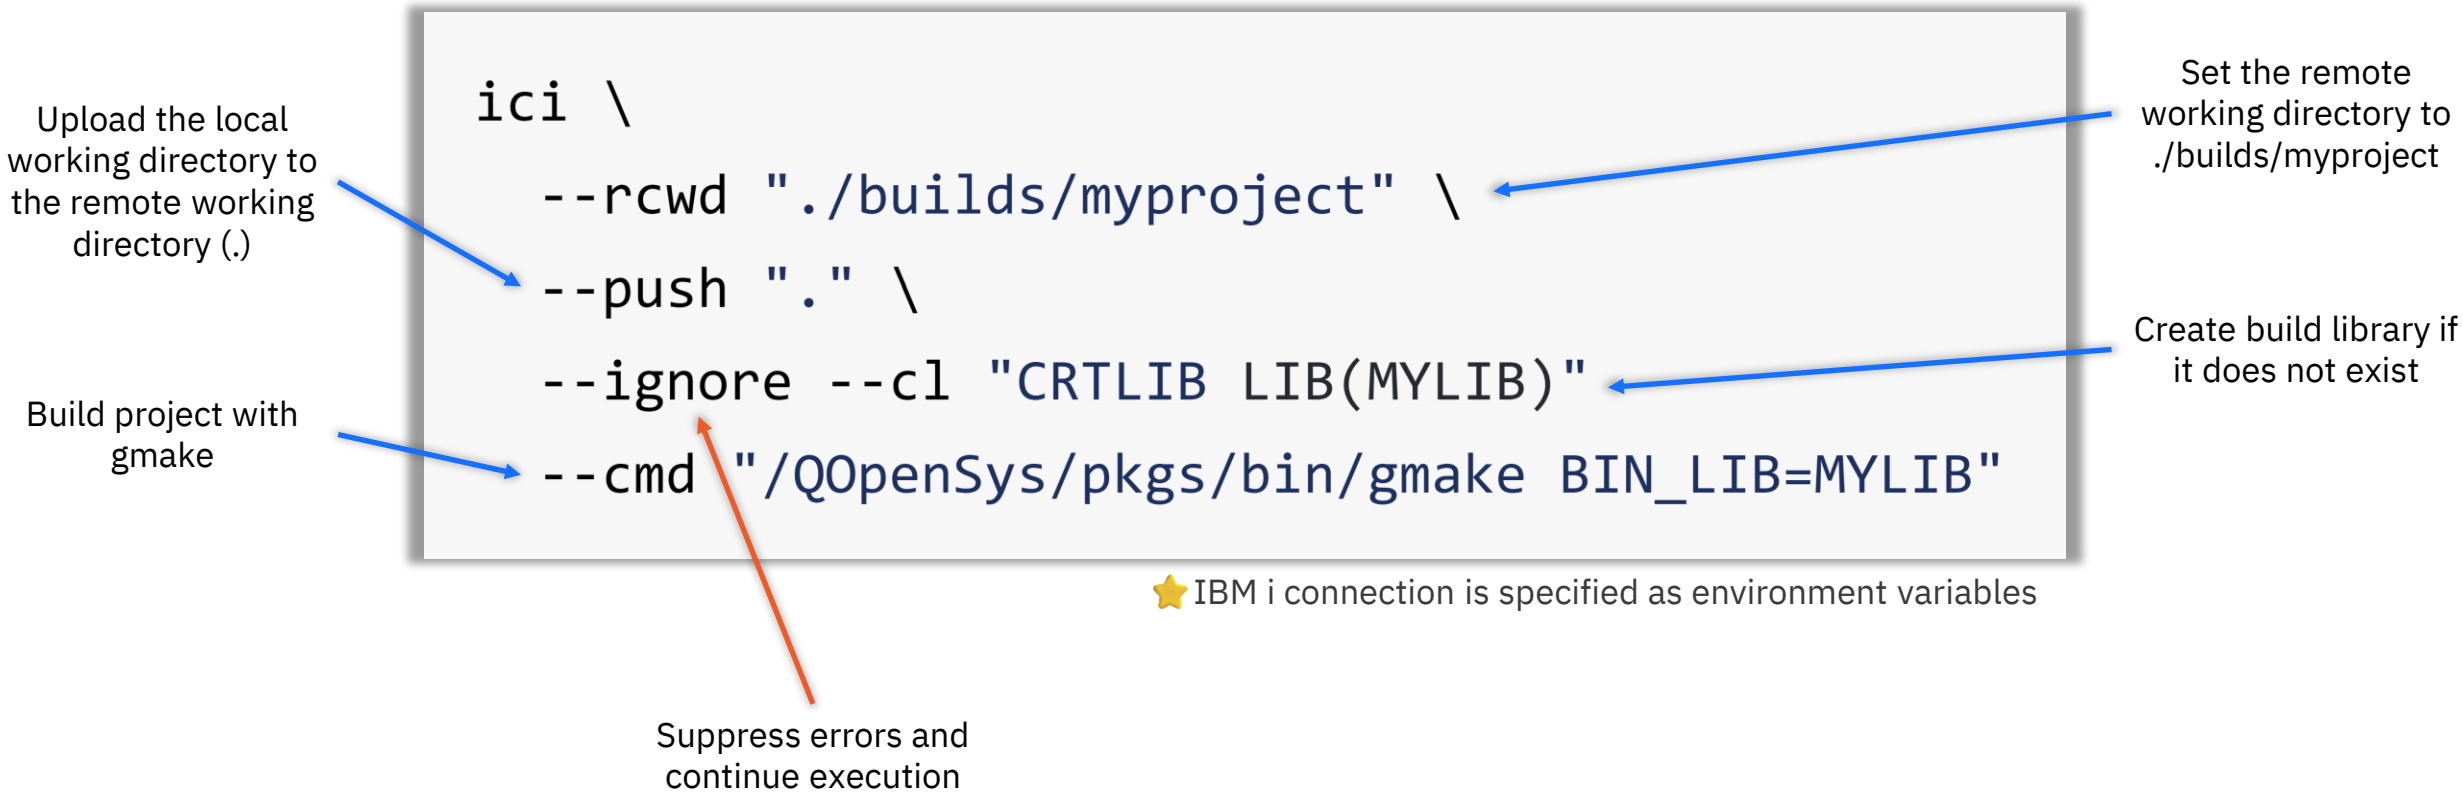
IBM i
continuous innovation
continuous integration

--lcwd <localDirectory>	Sets the current working directory on the local system
--rcwd <remoteDirectory>	Sets the current working directory on the remote system. It will be created if it does not exist.
--push <remoteRelativeDirectory>	Pushes the current working directory to a chosen directory on the IBM i
--pull <remoteRelativeDirectory>	Pulls a directory from IBM i to the local current working directory
--get <remoteRelativeDirectory> <localRelativePath>	Gets a specific file from IBM i
--cmd <shellCommand>	Execute a command on the remote system
--cl <clCommand>	Execute a CL command on the remote system

© Copyright IBM Corporation 2024

Simplistic Example

IBM i
continuous innovation
continuous integration



⭐IBM i connection is specified as environment variables

© Copyright IBM Corporation 2024

GitHub Action Example

IBM i
continuous innovation
continuous integration

```yaml
jobs:
  ibmi-build:
    environment: COMMON1
    runs-on: ubuntu-latest
    steps:
      # Checkout repository and setup node steps omitted

      - name: Install Dependencies
        run: npm i -g @ibm/sourceorbit

      - name: Deploy to IBM i
        run: |
          ici \
            --cmd "mkdir -p './builds/ics_${GITHUB_HEAD_REF}'" \
            --rcwd "./builds/ics_${GITHUB_HEAD_REF}" \
            --push "." \
            --cmd "/QOpenSys/pkgs/bin/gmake BIN_LIB=CMPSYS"
        env:
          IBMI_HOST: ${{ secrets.IBMI_HOST }}
          IBMI_USER: ${{ secrets.IBMI_USER }}
          IBMI_PASSWORD: ${{ secrets.IBMI_PASSWORD }}
          IBMI_SSH_PORT: ${{ secrets.IBMI_SSH_PORT }}
```

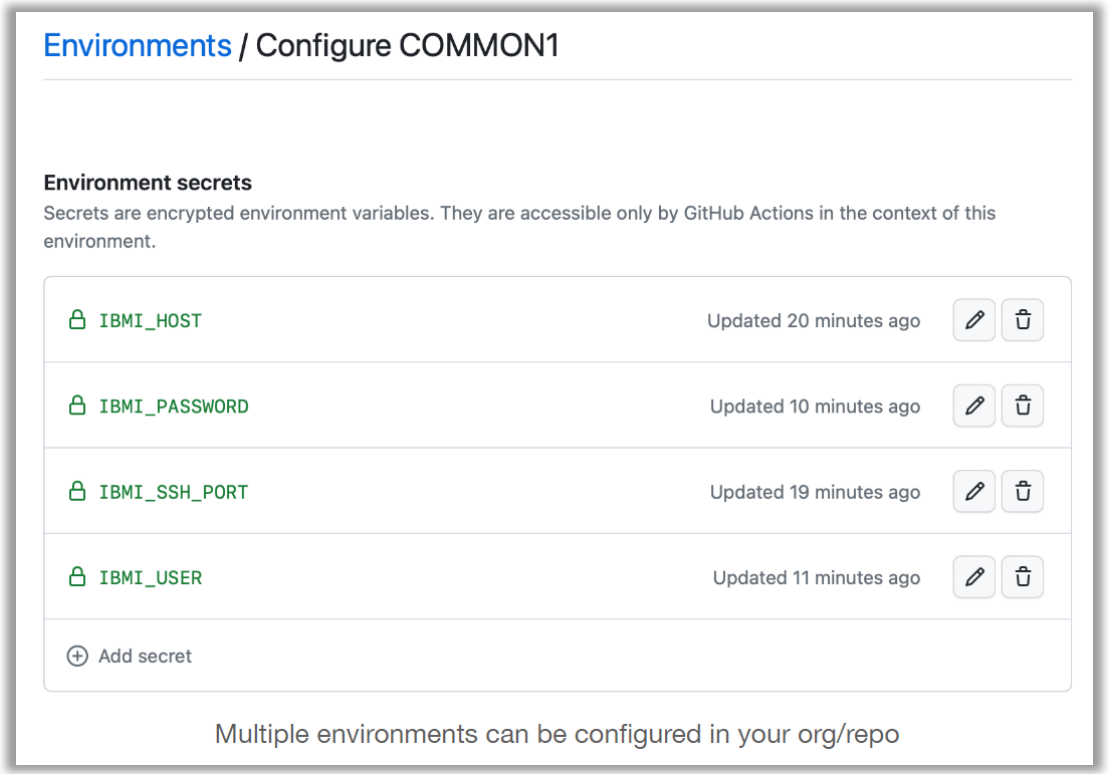
GITHUB_HEAD_REF is the head ref or source branch of the pull request

IBM i connection is specified as environment variables

© Copyright IBM Corporation 2024

Why use environments?

IBM i
continuous innovation
continuous integration



Use a matrix to run a workflow on multiple IBM i machines

```yaml
jobs:
  ibmi-build:
    strategy:
      matrix:
        environment: [COMMON1, OSSBUILD]
    environment: ${{ matrix.environment }}
    runs-on: ubuntu-latest
```

continuous innovation
continuous integration

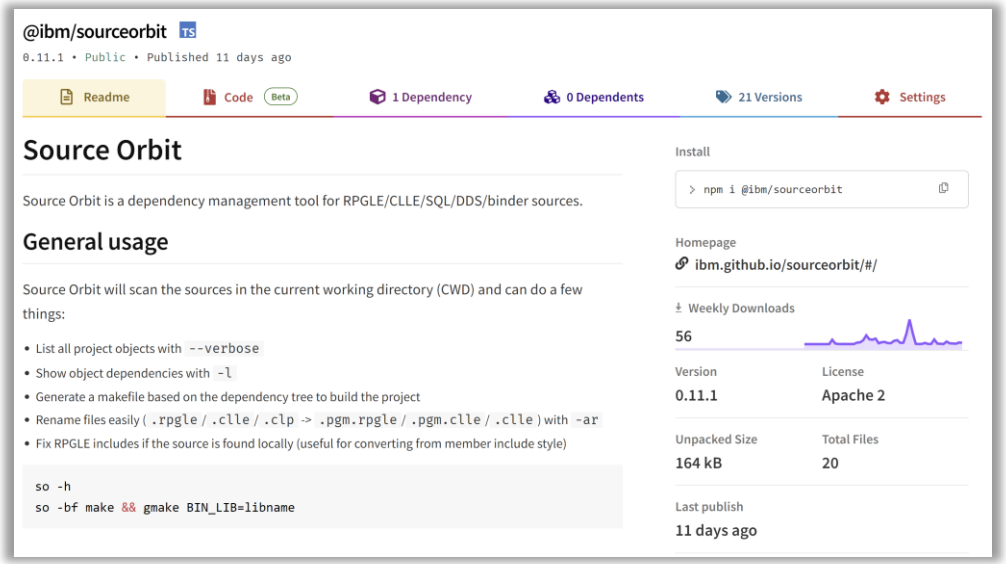
ILE Dependency Analysis with Source Orbit

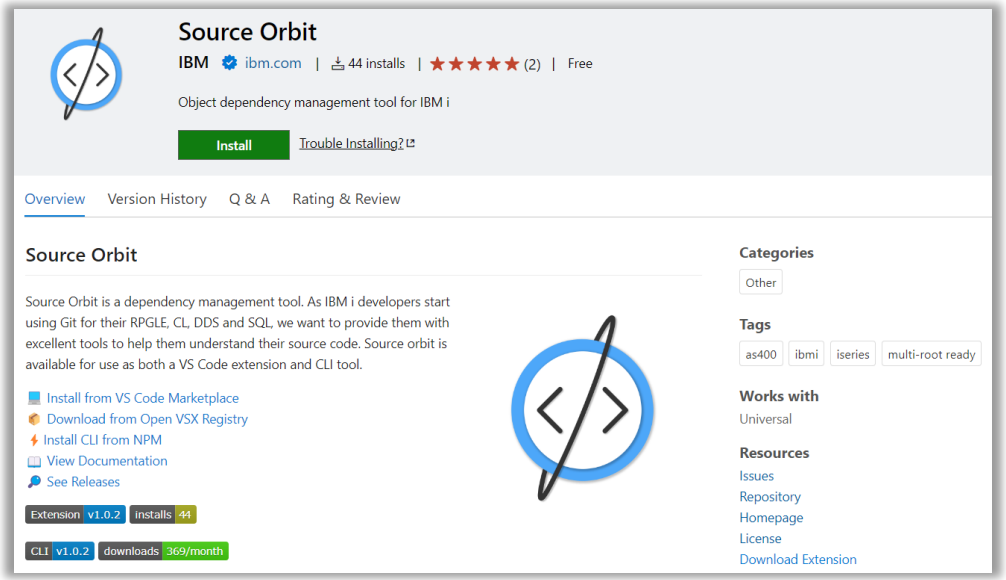
© Copyright IBM Corporation 2024

Overview

IBM i
continuous innovation
continuous integration

- A dependency management tool (CLI and VS Code extension!)
  - Build dependency tree for RPGLE, DDS, SQL, CL, etc.
  - Generates impact analysis information
  - Generate scripts to automate builds
  - Clean up your project
- CLI Installation
  - npm i @ibm/sourceorbit
- Extension Installation
  - https://marketplace.visualstudio.com/items?itemName=IBM.vscode-sourceorbit





© Copyright IBM Corporation 2024

CLI Usage

IBM i
continuous innovation
continuous integration

- so –ar
  - Scan all source code and fix extensions
    - Rename programs to have *.pgm.*
    - Rename include files to use *.rpgleinc*
    - Rename SQL source to use extension based on *CREATE* statement

- so –fi
  - Fix include/directory directives to use UNIX style paths if found in local source

- so -bf <type>
  - Generate build and dependency files
    - make: Generate single makefile with targets and rules
    - bob: Generate Rules.mk files for Bob
    - imd: Generate impact analysis for branches
    - json: Generate dependency info as JSON

- so –bl <name>
  - Generate a deterministic library name given a branch name

© Copyright IBM Corporation 2024

Repository Cleanup

Impact Analysis...What Objects Am I Affecting?

IBM i
continuous innovation
continuous integration

Impacted objects based on source changes

Full project dependency tree

so-impact summary

Impact Analysis

Touched objects:

- NEMP.FILE : qddssrc/nemp.dspf

NEMP.FILE

▼Click to expand

- NEMP.FILE (qddssrc/nemp.dspf)
  - NEWEMP.PGM (qrpglesrc/newemp.pgm.sqlrpgle)
    - DEPTS.PGM (qrpglesrc/depts.pgm.sqlrpgle)

Messages

No messages to show.

Dependencies of impacted objects

Project Listing

▼Click to expand

-	Object	Type	Path	Warnings	Parents	Children
	DEPARTMENT	FILE	qddssrc/department.table	▶	▶2	0
	DEPTS	FILE	qddssrc/depts.dspf		▶1	0
	EMPLOYEE	FILE	qddssrc/employee.table	▶	▶2	0
	EMPS	FILE	qddssrc/emps.dspf		▶1	0
	NEMP	FILE	qddssrc/nemp.dspf		▼1 NEWEMP.PGM	0
	POPDEPT	PGM	qddssrc/popdept.sql	▼ Extension should be based on type. Suggested name is 'popdept.sqlprc'	0	▶1
	POPEMP	FILE	qddssrc/popemp.sql		0	0
	DEPTS	PGM	qrpglesrc/depts.pgm.sqlrpgle	▶	0	▶4
	EMPLOYEES	PGM	qrpglesrc/employees.pgm.sqlrpgle	▶	▶1	▶2
	MYPGM	PGM	qrpglesrc/mypgm.pgm.rpgle	▶	0	0
	NEWEMP	PGM	qrpglesrc/newemp.pgm.sqlrpgle	▶	▶1	▶2

- *Parents* are objects that depend on this object.
- *Children* are objects that this object depends on.

GitHub Action Example

IBM i
continuous innovation
continuous integration

```yaml
jobs:
  so-impact:
    runs-on: ubuntu-latest
    steps:
      # Checkout repository and setup node steps omitted

      - name: Install Dependencies
        run: npm i -g @ibm/ibmi-ci

      - name: Generate impact information
        run: so -bf imd -l `git diff --name-only origin/main origin/${GITHUB_HEAD_REF}`

      - name: Adding markdown
        run: cat impact.md >> $GITHUB_STEP_SUMMARY
```

Generate impact analysis for changed files (compare main branch with pull request branch)

Redirect output to GITHUB_STEP_SUMMARY to create a custom Markdown job summary

Source Code Rules – Supported Extensions

IBM i
continuous innovation
continuous integration

Extension	Extension meaning	Notes
`sqlrpgle`	RPGLE (SQL)	Can use `.pgm` notation
`rpgle`	RPGLE	Can use `.pgm` notation
`clle`	CLLE	Can use `.pgm` notation
`cl`	CLLE	Can use `.pgm` notation
`clp`	CL (OPM)	Should be renamed to `clle`
`pf`	Physical File	Table
`lf`	Logical File	View/Index
`dspf`	Display File	
`prtf`	Printer File	
`msgf`	Message filee	
`sql`	Any SQL object	Type determined by create statement
`table`	SQL table	Expects `CREATE TABLE`
`view`	SQL view	Expects `CREATE VIEW`
`index`	SQL index	Expects `CREATE INDEX`
`alias`	SQL alias	Expects `CREATE ALIAS`
`sqlalias`	SQL alias	Expects `CREATE ALIAS`
`sqlprc`	SQL procedure	Expects `CREATE PROCEDURE`
`sqludf`	SQL function	Expects `CREATE FUNCTION`
`sqludt`	SQL table function	Expects `CREATE FUNCTION`
`sqltrg`	SQL trigger	Expects `CREATE TRIGGER`
`sqlseq`	SQL sequence	Expects `CREATE SEQUENCE`
`bnd`	Binder source	
`binder`	Binder source	Should be renamed `bnd`
`cmd`	Command	

© Copyright IBM Corporation 2024

Source Code Rules – Object Names

IBM i
continuous innovation
continuous integration

- Base name of source file becomes object name
- If source includes *.pgm*, then it will become a program
- If source does not include .pgm, then it will become a module, cmd, dtaara, etc.
- Assumes binder source (*.bnd*/*.binder*) is a service program

Source name	Resulting object
LCUS.LF	LCUS.FILE
CUS.PF	PCUS.FILE
dothing.cmd	DOTHING.CMD
pos123.dspf	POS123.FILE
faq500.rpgle	FAQ500.MODULE
faq401.pgm.sqlrpgle	FAQ401.PGM
faq500.bnd	FAQ500.SRVPGM

© Copyright IBM Corporation 2024

Source Code Rules – Long File Names

IBM i
continuous innovation
continuous integration

Source Orbit will generate a deterministic object name based on the file name

Source name	Resulting object	Note
`abcd.rpgle`	`ABCD.MODULE`	No change
`ab_cd.pgm.rpgle`	`AB_CD.PGM`	No change
`thisIsASuperLongName.pgm.clle`	`TIASLN.PGM`	First character plus following capitals
`FetchUserData.cmd`	`FUD.CMD`	All capitals from file name
`ua_fetchUserData.sqlrpgle`	`UAFUD.MODULE`	Prefix, followed by first post-prefix character plus following capitals
`ART200D-Work_with_Article.DSPF`	`ART200D.FILE`	Support for ibmi-bob file name

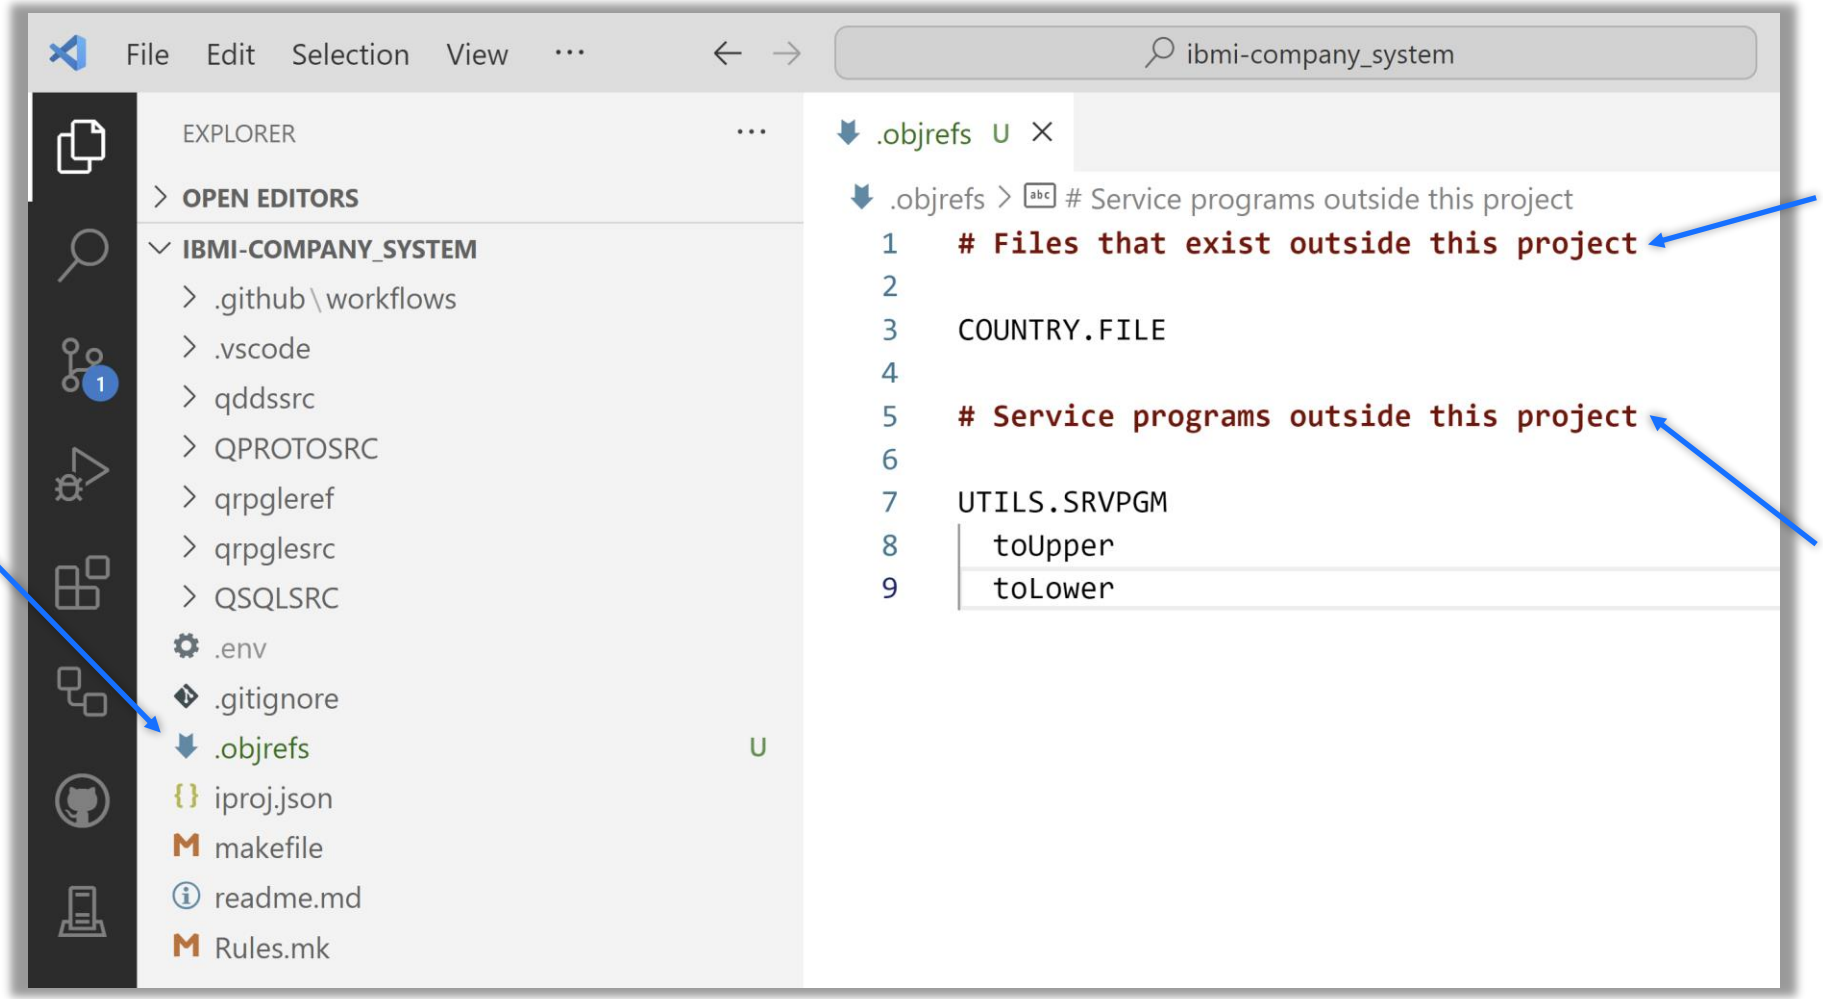
© Copyright IBM Corporation 2024

Source Code Rules – Unresolved Objects

IBM i
continuous innovation
continuous integration

Source Orbit will complain about unresolved objects

```
no object found for reference 'COUNTRY'
```



Create file in project root

List objects/source that are in another repository or already exist in a library

For service programs, list exports by indenting after reference
